

Food Ordering Behaviour Using Tableau

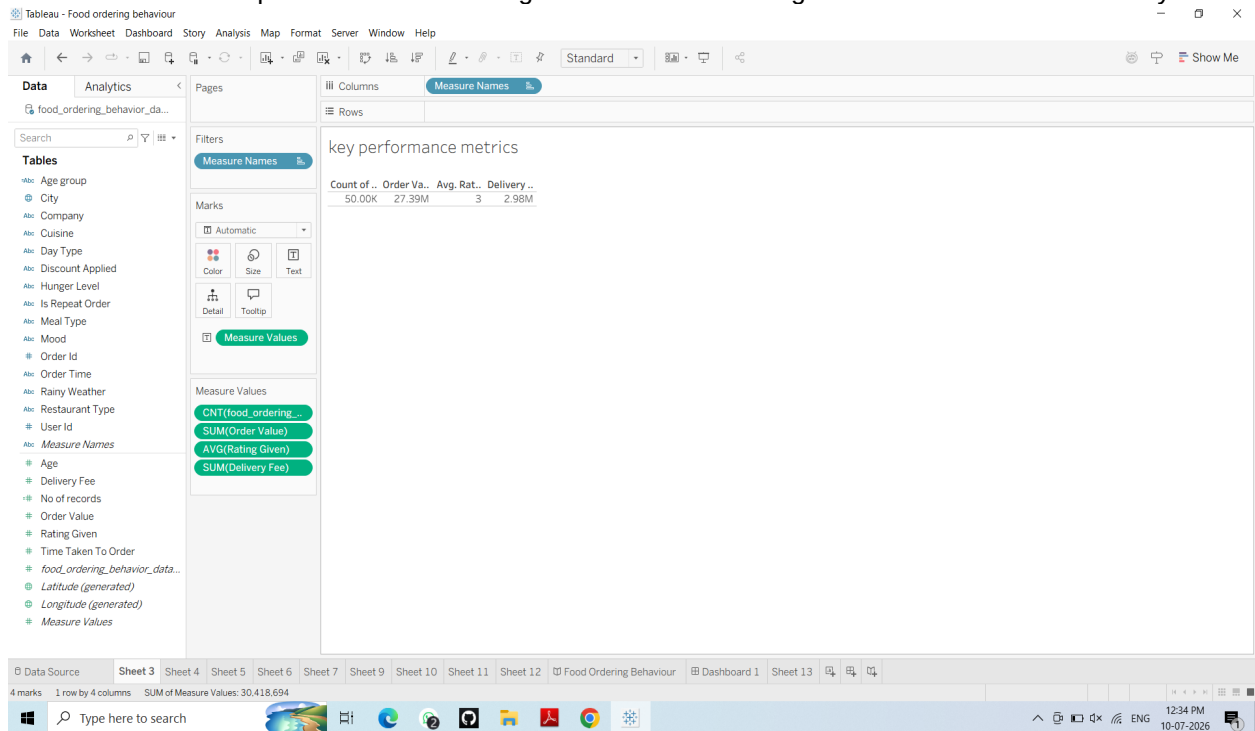

Student: Guvvala Haritha
Individual Project

Introduction

This project analyzes customer ordering behaviour using interactive Tableau dashboards to understand cuisine preferences, meal types, ratings, revenue, delivery time and city-wise demand.

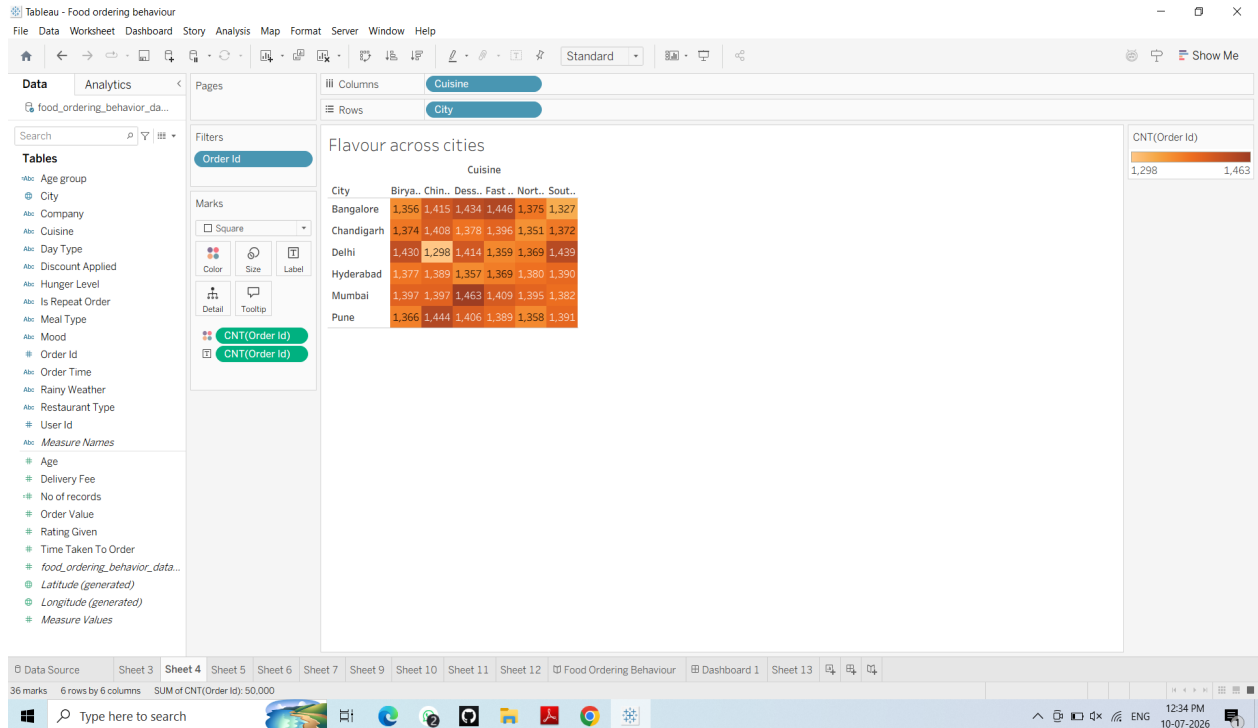

KPI Metrics

This visualization provides business insights for decision making and customer behaviour analysis.

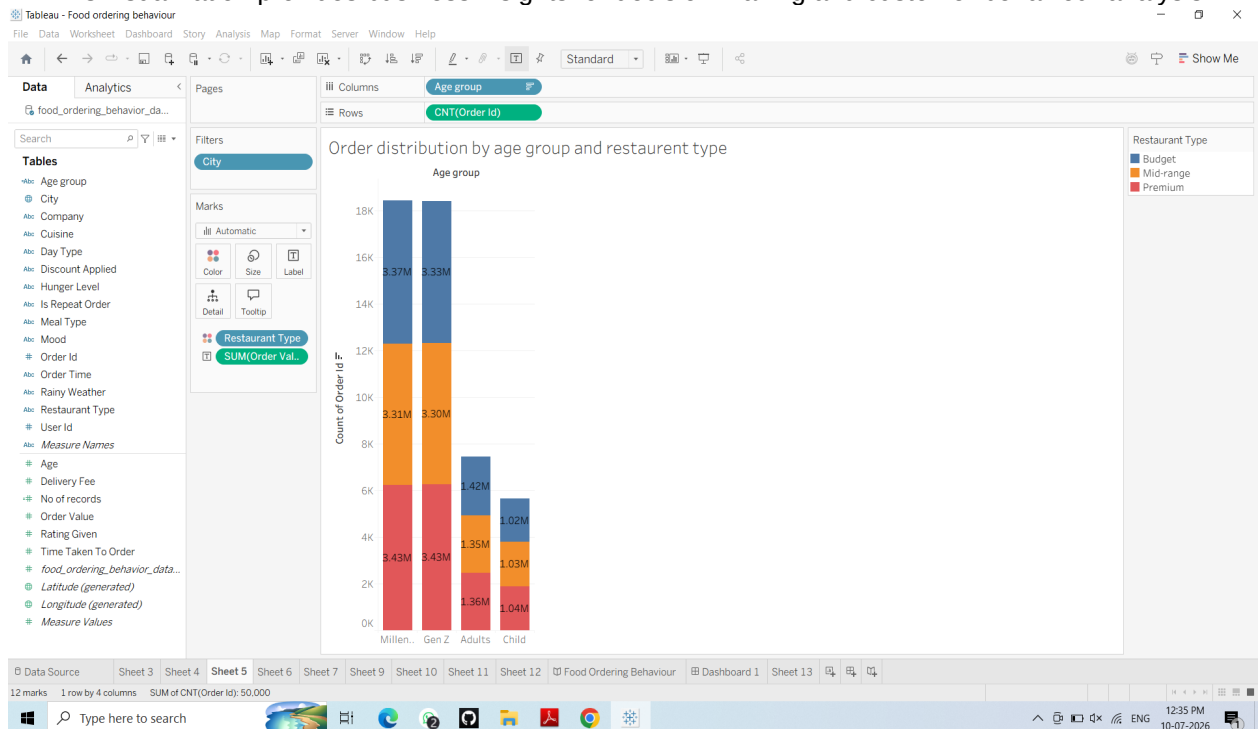

Flavour Across Cities Heatmap

This visualization provides business insights for decision making and customer behaviour analysis.

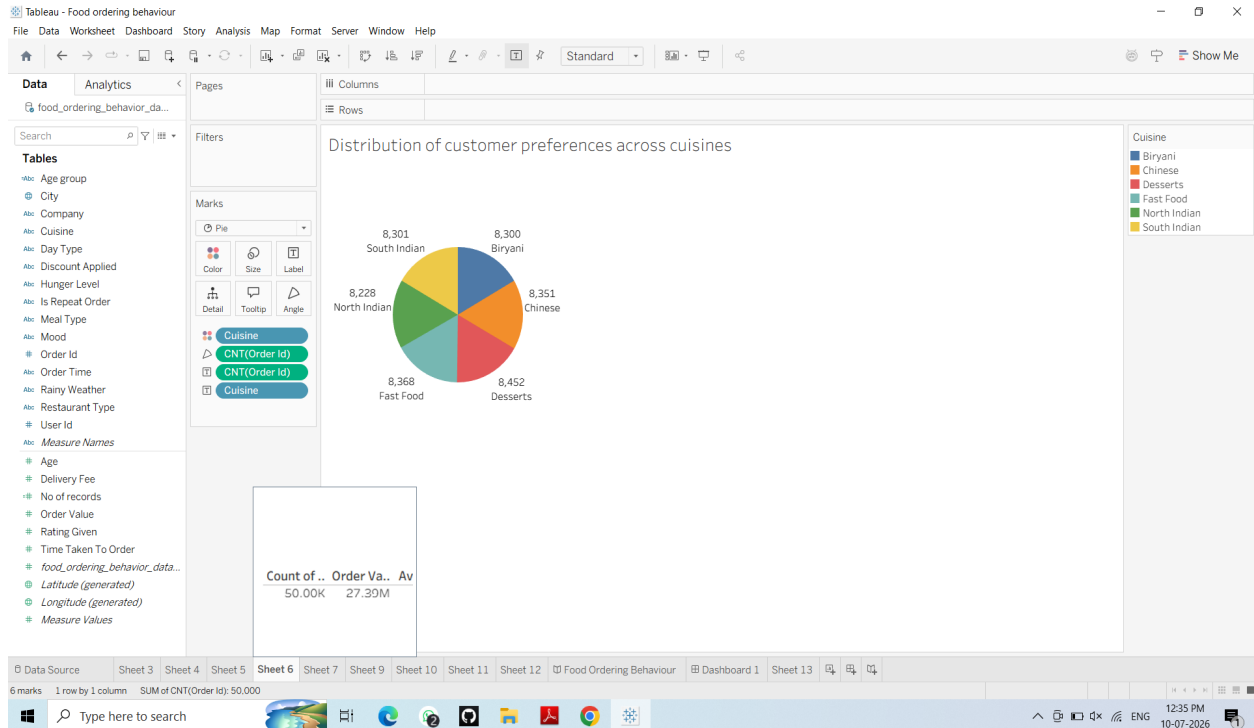

Order Distribution by Age Group

This visualization provides business insights for decision making and customer behaviour analysis.

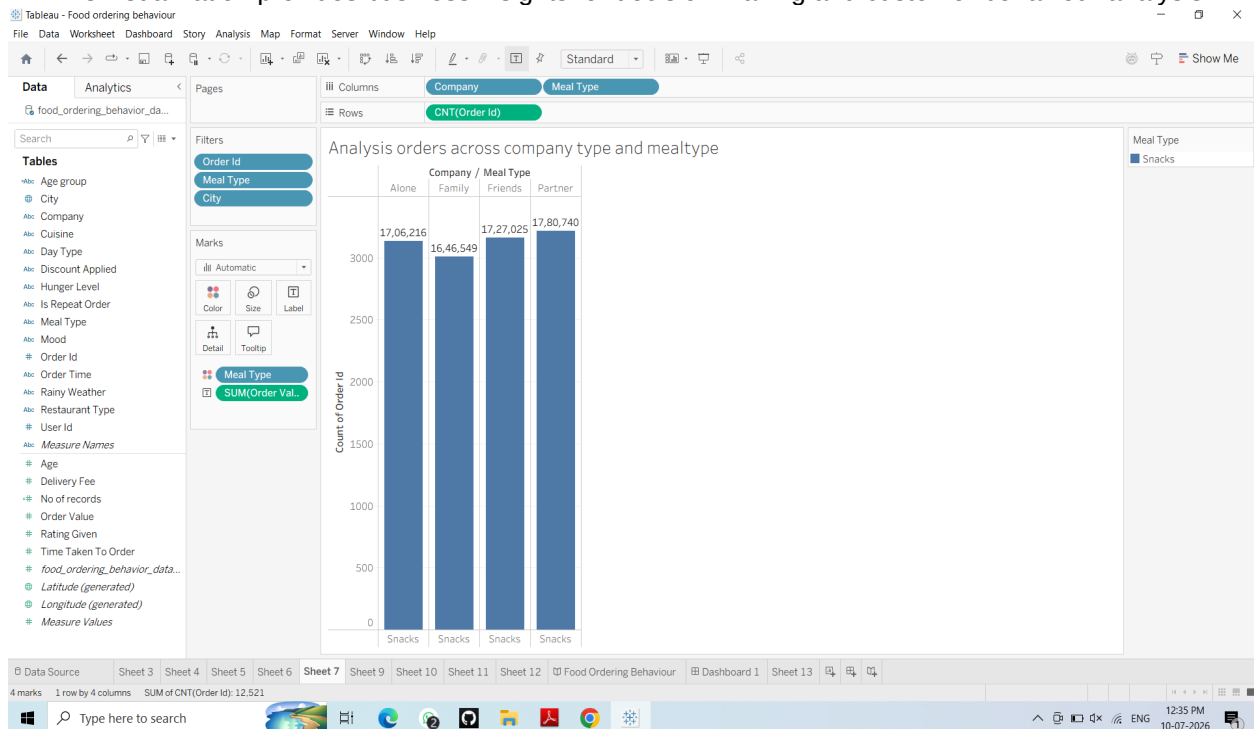

Cuisine Preferences

This visualization provides business insights for decision making and customer behaviour analysis.

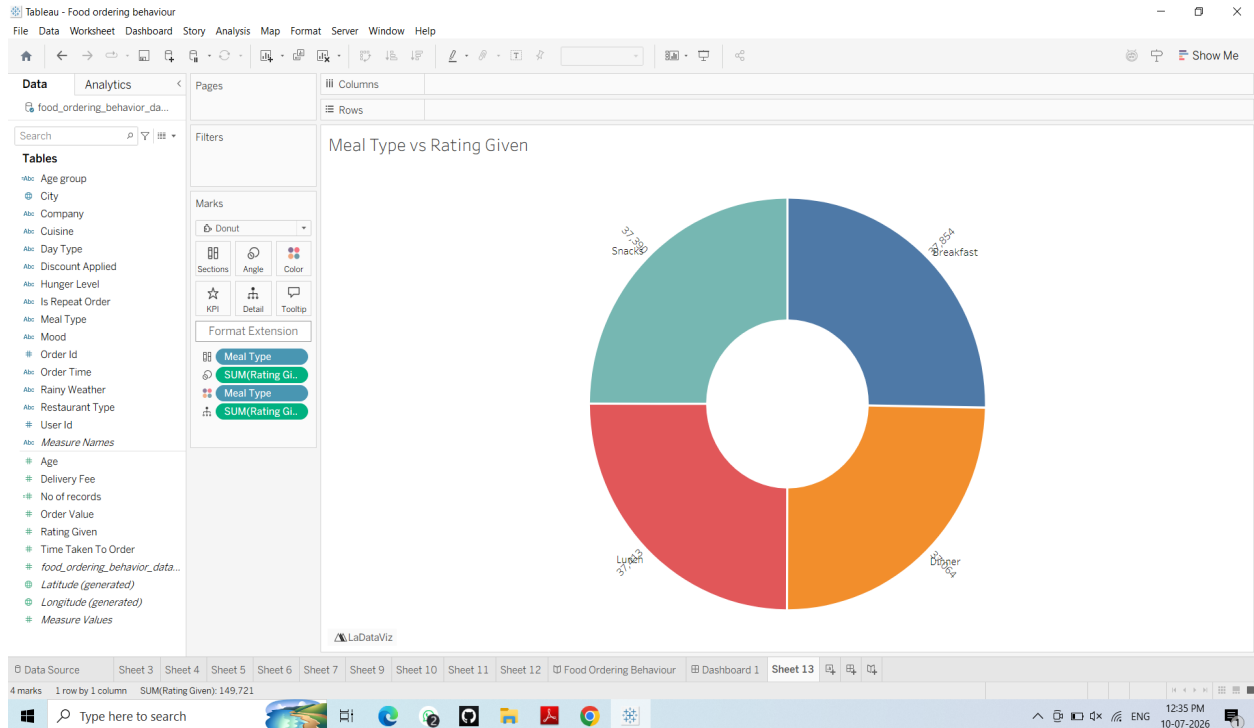

Orders Across Company Type

This visualization provides business insights for decision making and customer behaviour analysis.

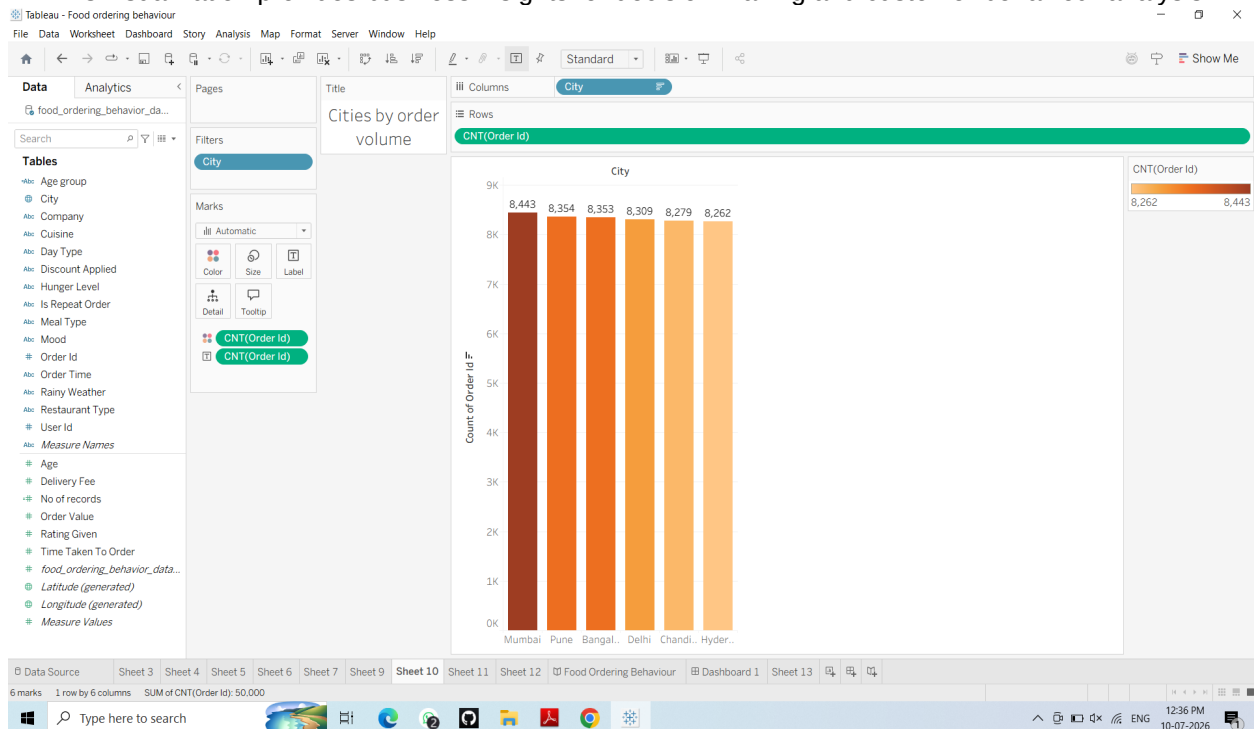

Meal Type vs Rating

This visualization provides business insights for decision making and customer behaviour analysis.

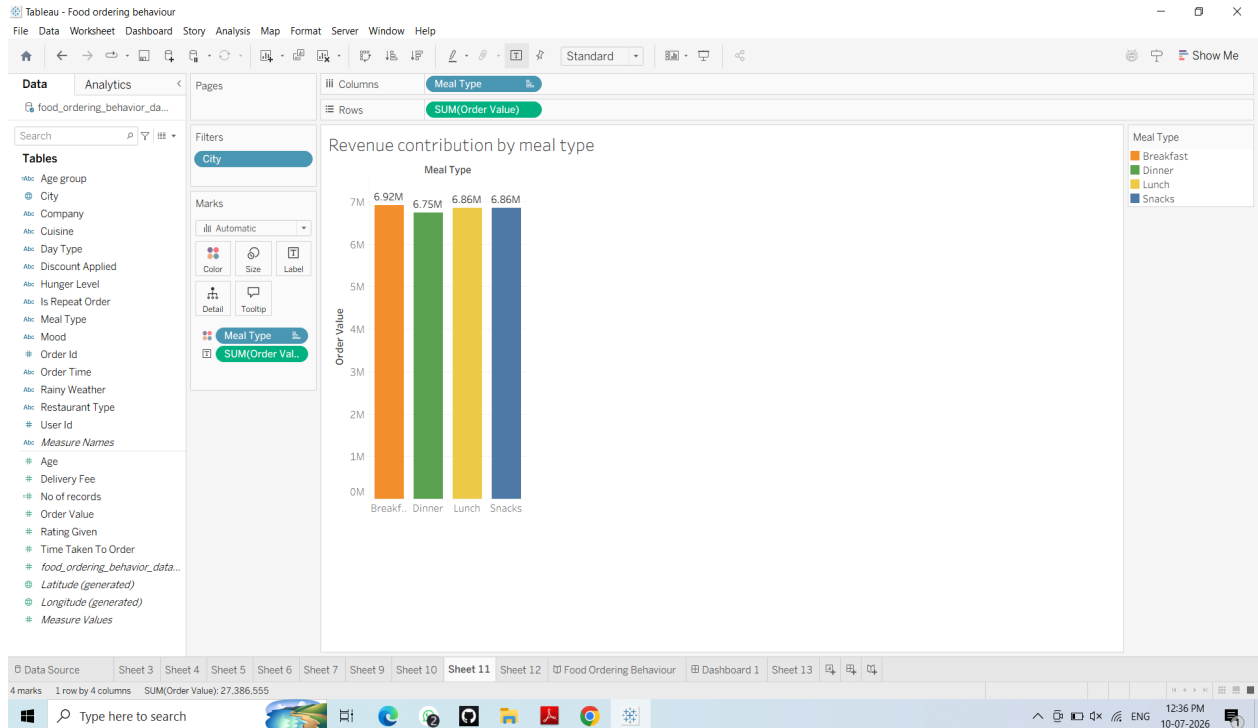

Cities by Order Volume

This visualization provides business insights for decision making and customer behaviour analysis.

Revenue Contribution by Meal Type

This visualization provides business insights for decision making and customer behaviour analysis.

Delivery Time Distribution

This visualization provides business insights for decision making and customer behaviour analysis.
